

# LANGLEY

SUTTON COLDFIELD

## THE PURPOSE OF THIS EVENT

The Consortium has been progressing the design work for the strategic infrastructure application for the scheme which will cover open space / landscaping (green infrastructure), surface water drainage and connectivity within the site. The key elements of the proposed strategic infrastructure and their broad locations are included on the plan below.

The Consortium is focusing on getting the strategic infrastructure approach right before it starts work on the design of buildings.

Following the public engagement sessions in July 2022, the Consortium has carefully reviewed and assessed all the comments received. The feedback has informed the production of more detailed plans to support the proposed planning application.

This event is intended to provide further details on the proposals prior to the submission of the strategic infrastructure application. The banners set out responses to the feedback received on the approach to green infrastructure, drainage and connectivity aspects of the development.

Please ask questions of the team. Copies of the exhibition banners are also available on the Consortium's website [www.langleysuttoncoldfield.co.uk](http://www.langleysuttoncoldfield.co.uk)
