

LANGLEY SUTTON COLDFIELD

CONNECTIVITY & MOVEMENT

The main primary and secondary streets will be located within the strategic infrastructure land. These will be the focus for bus routes within the site. Fox Hollies Road will be widened and will facilitate the passage of Sprint Bus (Bus Rapid Transit) through the site, including a bus gate to stop Fox Hollies Road becoming a through-route.

Traffic impacts on local roads needs to be appropriately managed and mitigatedThere is a focus on the provision of public transport, walking and cycling connectivity from the commencement of development to provide a genuine alternative to using the private car. Construction traffic will be managed through a Construction Environment Management Plan. The outline planning application seeks to manage traffic and facilitate a modal shift away from reliance on a car. Offsite highway mitigation and intervention measures will be implemented by Birmingham City Council and funded by the Consortium through the S106 Agreement.Traffic management interventions are required to encourage more people to walk and cycle, such as: • segregated cycleways and walking routes;Around 40km of new walking & cycling routes are being provided through the S106 Agreement.• segregated cycleways and walking routes;Cycle parking is being included at appropriate locations. The primary and secondary highway routes will incorporate off-carriageway segregated walking and cycling lanes with safe crossing points.• bike / scooter hire schemes; • 20mph speed limits.Proposing the main roads to be 30mph and the remaining roads 20mph. Design will include locations for secure bicycle storage, with opportunities for electric scooter & bicycle hire.Measures to improve the attractiveness ofThe primary and secondary roads are being designed to
